NEW MATERIAL DESIGN WITH ROBOTO VF

SPEC INTRO

The latest Material Design ramp is a broad spectrum of 15 sizes, from which a series of sizes are to be seclected for three, (or more?) viewport sizes.

Link to specification here: https://m3.material.io/styles/typography/overview

Paying particular attention to the excellent quote from the link above, and the section “Customizing the typeface”:

“Sizes on the rendered type scale should aim to provide impactful contrast between sizes by avoiding small differences.”

This advice is the tale of much of user’s choices of styles within the design space. This advice on size selection, though only 1/2 of that which can easily be given, can be seen in good typography.

There should be small size steps in the small range of font sizes, and larger steps in the large of size range. In weight, there should be larger steps in smaller sizes and there can be smaller steps in larger sizes. In width, small steps can be used in small sizes, and large steps are best in larger sizes.
